## 2. BALOK

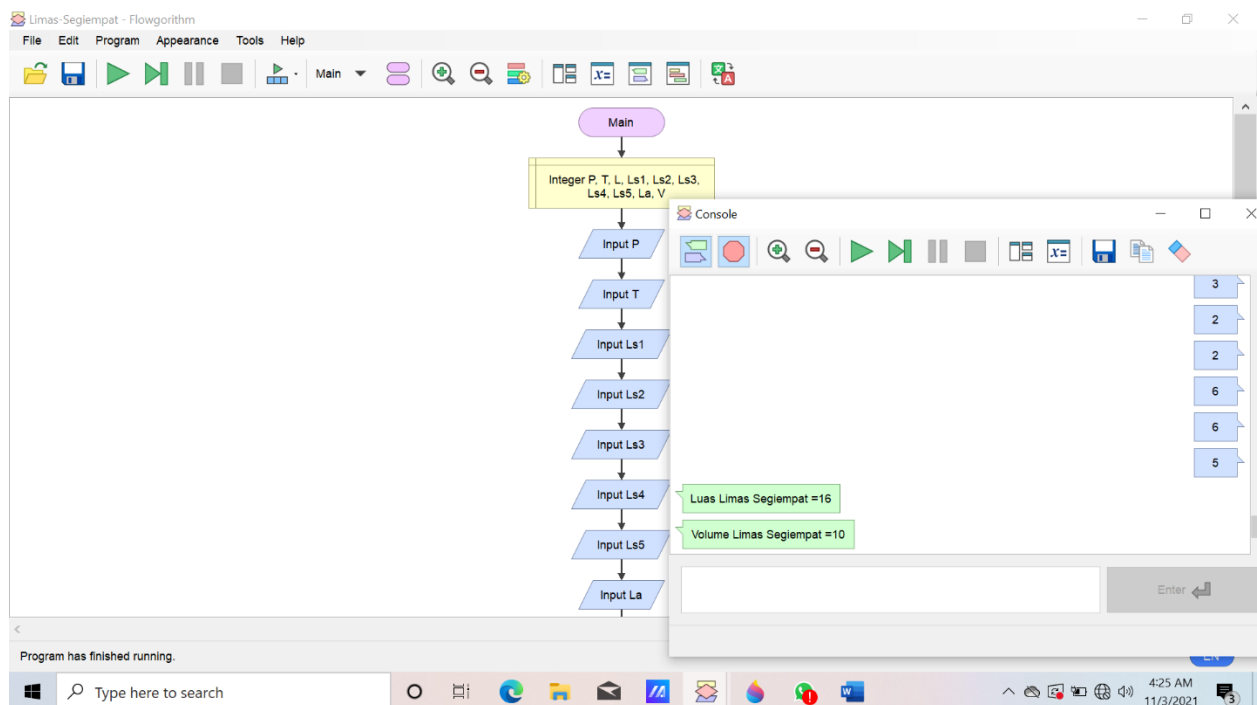

The image shows a Visual Studio Code window with a Python file named `BALOK.py`. The code calculates the surface area and volume of a rectangular prism based on three inputs: `p` (length), `l` (width), and `t` (height). The formulas used are  $c = 2 * p * l + 2 * p * t + 2 * l * t$  for surface area and  $v = p * l * t$  for volume.

```
1 p = int(input())
2 l = int(input())
3 t = int(input())
4 c = 2 * p * l + 2 * p * t + 2 * l * t
5 v = p * l * t
6 print("LUAS=" + str(c))
7 print("VOLUME=" + str(v))
8
```

The terminal shows the command to run the script and the resulting output:
